MONTHLY PROGRESS SUMMARY REPORT (PSR) (March - May 2026)

Full Name: _____

Age/Sex: _____

Diagnosis: _____

DATA

The client participated in a series of group activities that measured his adaptive functioning in the following domains:

- Conceptual Domain
- Social Domain
- Bodily Kinesthetics Domain
- Practical Domain

ASSESSMENT

Throughout the series of group activity sessions, Aba consistently demonstrated excitement and anticipation whenever an activity was about to be carried out, as evidenced by his smiling face and giggles. However, he was deemed to experience difficulties during the activities. Furthermore, despite being only able to speak limited words, he could express himself verbally. Moreover, he consistently echoed words he heard during activities, such as *'hila'* and *'salo'*.

In the conceptual domain, Aba repeatedly echoed the words of the intern like *'lagay'*, *'patong'*, and *'hawak'* when giving him verbal instructions during the cup stacking activity. At first, he encountered difficulty in stacking on his own, but with hand over hand assistance in first and second try, he was able to stack one cup independently in his third try. However, in the coloring activity, he colored the object in a back-and-forth direction, focusing on only one part of the object, despite receiving verbal assistance from the intern.

During the activities focused on social domain which involved Zumba exercise, Aba was able to follow the steps despite only showcasing small movements. He was also smiling while doing the activity. On the other hand, Aba persisted in remaining out of line, despite attempts by the intern to guide him back by placing his hand on that of a fellow resident. Additionally, he withdrew his hand once the walking commenced.

In the practical domain, Aba has difficulty performing the tasks in the ADL board. When the intern tried to give him verbal and hand over hand assistance, he just echoed the words of the intern like *'hila'*, and *'butones'*. In addition, Aba displayed difficulty in shoe lacing, and constantly stared at the shoes, despite hand over hand assistance and visual demonstration from the intern.

During the activities included in bodily kinesthetics domain, Aba bounced the ball with little force, causing it to either not reach the target or change direction in the ball throwing activity. Despite verbal guidance and demonstrations, his throwing technique persisted. As a result, Aba unattained to knock down the stack of cups. In addition, he encountered difficulty in the ball catching activity, despite repeating the intern's words.
